

AVANT SHOP THE COUNTER- OPERATED CIGARETTE VENDING MACHINE

AVANT SHOP

The most advanced technological solution for the over-the-counter sale of cigarettes in convenience stores.

A system that is set to increase your sales.

Return on investment

- 15 to 25% sales increase.
- Indirect sales opportunities arise: the customer needs to go to the counter to buy cigarettes.

More information on consumer behaviour

- The cashier handles the cigarette sale together with any other products that the customer may purchase: information on consumer behaviour.

Security

- There's no money inside the machine, preventing theft and also avoiding the need to handle money by putting more change into the machine or cashing up.

Time saving

- There is no need for an end-of-shift or end-of-day cash-up, to count money or to have change available for putting in the machine.
- The buyer's age is verified at the time of purchase, avoiding wasting the employees' time and with no hassle.

17" TOUCH SCREEN

SUPER KING CHANNELS

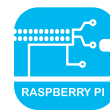

TELEMETRY CONNECTION WITH GMBOS

LED LIGHTING

DIFFERENT DISPENSING CONTROL OPTIONS (TABLET, POS INTEGRATION)

RASPBERRY PI PROCESSOR

How it works

1. The customer requests the cigarettes and pays at the counter.
2. The employee selects the cigarettes from the tablet or POS.
3. The vending machine dispenses the packet, which is picked-up by the customer.

Advantages of the screen

- **Price display:** product prices always displayed on the screen with no need to press any buttons, and the prices can be seen by the customer and the shop assistant.
- **Different screen/brand configurations:** 15/18/28/40/60 product facings.
- **Greater brightness** and prominence of the brands on the screen.
- **Logistics cost savings and brand control.** Possibility of updating the product facings remotely through the GMBOS with no need to be at the machines.
The screen displays customised messages: "Please go to the counter" ... "Please request authorisation" ...

Telemetry + screen

The real-time management of all machines online, simply through an internet connection, smartphone, tablet or PC.

- Price changes.
- Brand updates.
- Screen configuration change.
- Plus all the advantages of the GMBOS telemetry system:
 - Sales reports.
 - Stock controls, replenishments and end of shift cash-ups.

On-screen advertising option

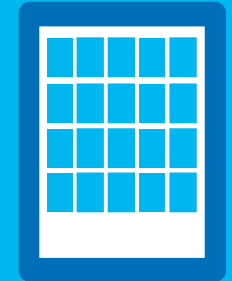

Web access is all that is needed for the centralised management by the GMBOS telemetry system of the advertising in the entire fleet of vending machines. The advertising manager can be used to generate a play list and to program the times.

Screen characteristics:

- 17" screen.
- Advertising resolution: 1024x576 (screen ratio 16:9).
- The cigarette products on display co-exist with adverts (video or image).

Machine integration with tablet and POS
